# Sprint Review (Product), describe the following:

- **What was completed?**
  - Sprint Points completed: **16**
- **Sprint Points completed:**
  - 0 (we were occupied with other tasks as opposed to user stories and other work)
- **What to update in the product backlog?**
  - US #6, US#18
- **When is the next sprint planning date?**
  - 6/11/22

Sprint Planning

- As usual - user story points remained same after re-estimation
- User stories assigned for next sprint

Sprint Retrospective (Process & Team):

What went well?

- Reviewed user stories to ensure they are more "manageable" and be able to complete within a sprint.
- Pair programming helps team members to speed up and produce higher-quality code.

What could be improved?

- Some of our user stories had dependencies on each other so we ended up waiting for others to start working first.
- We should try not to overestimate the amount we can complete given that we are only working on this project part-time.
- We should apply the Branching technique more(use it for new features, and even smaller tasks like bug fixes).
    - There were times when bugs were caused by branch merges, affecting other people's code.

How can we improve it?

- We have a clearer picture of how things are connecting to one another so hopefully, we can reduce the number of bugs in the different functionalities
- Better communication when conducting refactoring of code.
- We should do our own manual testing after every merge(not only your own features but the previous features done as well).
- Give more feedback to each other. Don't hesitate to speak up.
